

## **The 4-H Science of Energy Kits are Here!**

Don't miss an opportunity to check out these kits for your class room, home school or for a student needing a really fabulous science fair project or for all of those who are just plain curious about how energy works! Here are just a few of the things you can discover

- Can potential energy be changed to kinetic energy and how can rubber balls help us find out?
- What reaction between two common kitchen ingredients absorbs heat?
- Can we use radiant energy for power?
- Can we produce electric with an apple?

A set of four energy kits are housed in Yamhill, Baker, Clackamas, Wasco, Coos and Josephine counties and the wildlife stewards office in Portland. Lane and Umatilla counties each have a Science of Energy survey sample kit. Contact these locations directly to arrange to use the kits.
